

WorldMem Speculative Peak-GPU Scaling

Projected Total Peak GPU Usage

Resident Bank Component

Measured anchors: CECSL one-video profiles at 10s and 60s. Curves beyond those points extrapolate a fitted model peak plus resident-bank size. WorldMem's actual bank is compact latent state at 128x128; RGB curves are speculative what-if storage variants.

- CPU offload / fitted model peak
- Spec RGB fp16 128² bank, unbounded
- Spec RGB fp16 512² bank, unbounded
- GPU latent bank, unbounded
- Spec RGB fp16 512² bank, RI b32
- GPU latent bank, RI b32
- Measured CPU-bank anchors
- Measured latent unbounded
